

Paper assignment: Grading Criteria

1. Understanding of general topic
 - Summary of base paper (review article) – thorough but concise
2. Presentation of experimental paper
 - Selection of paper – must be experimental and neuroscience based
 - Present enough details of paper to show understanding
 - Why did they do the experiment(s)?
 - How did they do the experiment(s)?
 - What did they conclude from the experiment(s)?
3. Conclusions and Critique: discussion of how this experimental paper helps you understand the general topic/base paper; general critique (do the data say what the authors think it does?)
4. References – APA format
 - Within text e.g., (Schillaci et al., 2006)
 - Reference section
